Application as AI Engineer — Automation & Internal Systems

Dear Recruiting Team,

Connecting advanced mathematical modeling with production-grade AI infrastructure requires more than basic model training. It demands rigorous numerical foundation, hardware-accelerated execution, and scalable data architectures capable of handling complex enterprise data streams. Holding an M.Sc. in Scientific Computing with over 9 years of engineering experience, I specialize in translating AI models into reliable production systems.

From embedded GPU hardware acceleration (CUDA/ONNX) to cloud-native RAG retrieval backends (vector databases, PyTorch, AWS/Azure), I bring the technical depth required to advance data-driven intelligence at **nyra health**.

Key alignment with your AI & Data Engineering objectives:

- **Mathematical Rigor:** Master's degree from the University of Vienna in Scientific Computing, focusing on numerical algorithms, linear algebra, and data optimization.
- **Production AI & RAG Architectures:** Practical experience designing and deploying cloud-based Retrieval-Augmented Generation (RAG) backends, vector databases, and automated PyTorch pipelines.
- **Hardware Acceleration & Data Systems:** Demonstrated success optimizing deep learning inference using CUDA for real-time edge processing and scaling data pipelines with PySpark, DuckDB, and PostgreSQL.

nyra health stands out to me because of *AI-native company automation and workflows*. I look forward to contributing my machine learning engineering and performance tuning expertise to your team.

I look forward to discussing my technical background and past projects in an interview.

Sincerely,

Markus Gruber, M.Sc.
